How do Photovoltaics Work? | Science Mission Directorate The first photovoltaic module was built by Bell Laboratories in 1954. It was billed as a solar battery and was mostly just a curiosity as it was too expensive to gain widespread use. In the 1960s, the space industry began to make the first serious use of the technology to provide power aboard spacecraft. Photovoltaic Research | NREL The National Center for Photovoltaics (NCPV) works to advance the state of the art across the full spectrum of photovoltaic (PV) research and development at the National Renewable Energy Laboratory (NREL). Our cutting-edge research focuses on boosting solar cell conversion efficiencies; lowering the cost of solar cells, modules, and systems; and improving the reliability of PV components and systems.
