OSA | Photoinduced phenomena in nano-dimensional glassy As ... Photoinduced anisotropy in nano-dimensional (ND) thin films (<50nm thick) of chalcogenide glasses is observed for the first time. Results of photoinduced dichroism and photodarkening effect in 10, 20, 50 and 100 nm glassy As₂S₃ films are presented and compared with photoinduced phenomena in thick films (>1 μm. Special Issue "Photoinduced Cooperative Phenomena" It has been shown that, not only the electronic correlations, but also the interplay of electrons, phonons, and photons, are a key to understanding the mechanism of these phenomena, which also opened up the possibility of the coherent control method. Photoinduced phenomena in Sr_{1-x}CaxTiO₃, 0 ≤ x ≤ 0.12 ... Abstract Photoinduced changes of the spectral, temperature and time dependences of the conductivity, the Cr³⁺ R-luminescence, the electron paramagnetic resonance, the refractive index and of the spatial variation of the linear birefringence are measured in nominally pure SrTiO₃ and ferroelectric Sr_{1-x}CaxTiO₃ (x=0.007 and 0.12). In both materials a large, long time persisting increase of the. Photoinduced phenomena in Sb₂Se₃-BaCl₂-PbCl₂ glasses ... Photoinduced optical phenomena in amorphous Sb₂Se₃ - BaCl₂ - PbCl₂ glasses have been studied using experimental spectroscopic and theoretical quantum chemical methods. Photo-induced two-photon absorption (TPA) and second harmonic generation (SHG) were measured for the probing CO₂-laser wavelength 10.6 micrometers.

Selenium-loaded zeolite (ZSM-5): II. Photoinduced phenomena Photoinduced phenomena in Se-loaded ZSM-5 single crystals have been studied through electron-spin resonance, optical absorption, and photoluminescence spectroscopy. Marked exposure effects appear at room temperature.
